

Zigbee PRO 2023

Zigbee PRO 2023 compliant platform (network stack) introduces new features that product manufacturers can utilize in their existing Zigbee 3.0 products and beyond

Addresses modern-day security threats by implementing additional mechanisms to protect the network during the onboarding and operation of devices

Zigbee Direct that simplifies device onboarding and control by utilizing Bluetooth Low Energy

Expands SubGHz support to North American and EU markets to deliver increased signal strength and range to reach more places around your home or property

Zigbee devices will be able to share network with high-security energy, EV chargers, etc. devices for unified management and monitoring of all sources of energy in the residential and commercial spaces

Standardizes hub-centric onboarding of devices
